Foiling

Foiling is the application of a reflective layer on the underside of the stone to create maximum brilliance. Foiled stones are perfectly suitable for gluing because they do not lose their optical characteristics.

NOTE:

* Preciosa's patented Permanent Color Treatment (PCT) technology opens up a range of exciting new possibilities in the coloration and durability of cubic zirconia. Developed according to the latest discoveries in material science, our innovative color application process creates a uniform, permanent colored layer across the stone's pavilion. Our PCT stones are able to sustain cast-in-place production techniques and cleaning processes such as ultrasound, magnetic pin and acid baths. Our selection of PCT colors are part of our regular assortment of colors and coatings for cubic zirconia.

** Available for all colors and materials
